The prospectus should be read carefully prior to investing in the Quantified Funds.**

High portfolio turnover may result in higher transaction costs and higher taxes when Fund shares are held in a taxable (non-qualified) account. Such costs are not reflected in annual Fund operating expenses and may affect the Fund's performance.

There is no guarantee the Fund will achieve its investment objective. There is no guarantee that any investment strategy will generate a profit or prevent a loss.

An investment in the Fund entails risk, including loss of principal.

Risks specific to investing in the Quantified Common Ground Fund include: Subadviser's Investment Strategy Risk, Active and Frequent Trading Risk, Aggressive Investment Techniques, Counterparty Risk, Credit Risk, Derivatives Risk (including hedging and swap risk), Equity Securities Risk, Interest Rate Risk, Leverage Risk, Lower-Quality Securities Risk, No History of Operations Risk, Risks of Investing in Other Investment Companies (ETFs and mutual funds), and Small- and Mid-Capitalization Companies Risk.

Alpha measures the difference between an investment's expected returns based on its beta and its actual returns. A positive alpha indicates the investment has performed better than its beta would predict. A negative alpha indicates an investment has underperformed, given the investment's beta. Beta measures an investment's sensitivity to market movements. A beta greater than one indicates the investment is more volatile than the market. If beta is less than one, the investment is less risky than the market. Standard deviation measures the range of an investment's performance. The greater the standard deviation, the greater the investment's volatility. The Sharpe ratio indicates the reward per unit of risk by using standard deviation and excess return. The higher the Sharpe ratio, the better the investment's historical risk-adjusted performance.
