The S&P500/Bloomberg Aggregate Bond Index is a blended index consisting of the following: S&P500 TR Index and Bloomberg U.S. Aggregate Bond Index. The S&P 500 TR Index is a capitalization weighted index of 500 stocks representing all major domestic industry groups. The S&P 500 TR assumes reinvestment of dividends and capital gains. The Bloomberg U.S. Aggregate Bond Index measures performance of the total U.S. investment grade bond market. It is a market value-weighted index that tracks the daily price, coupon, pay-downs, and total return performance of fixed-rate, publicly placed, dollar-denominated, and non-convertible investment grade debt issues with at least \$250 million par amount outstanding and with at least one year to final maturity.

It is not possible to directly invest in any index.

An investment in the Fund entails risk, including loss of principal.

Risks specific to investing in the Quantified Pattern Recognition Fund include: Subadviser's Investment Strategy Risk, Active and Frequent Trading Risk, Aggressive Investment Techniques Risk, Counterparty Risk, Credit Risk, Derivatives Risk, Equity Securities Risk, Leverage Risk, No History of Operations Risk, Non-Diversification Risk, Risks of Investing in Other Investment Companies (ETFs and mutual funds), and Shorting (Inverse) Risk.

Alpha measures the difference between an investment's expected returns based on its beta and its actual returns. A positive alpha indicates the investment has performed better than its beta would predict. A negative alpha indicates an investment has underperformed, given the investment's beta. Beta measures an investment's sensitivity to market movements. A beta greater than one indicates the investment is more volatile than the market. If beta is less than one, the investment is less risky than the market. Standard deviation measures the range of an investment's performance. The greater the standard deviation, the greater the investment's volatility. The Sharpe ratio indicates the reward per unit of risk by using standard deviation and excess return. The higher the Sharpe ratio, the better the investment's historical risk-adjusted performance.
